

# Why Test?

## Build Trust

Indoor air quality testing provides both the homeowner and the HVAC contractor with valuable scientific data on potential air quality problems in the home. It is the first step in creating solutions for the homeowner. The Home AirBoxx helps to build a trusting homeowner/contractor relationship and takes the guess work out of IAQ solutions. This approach sets the contractor apart as a professional IAQ solutions provider.

## Use Quality Tools

The Home AirBoxx is an indoor air quality testing device designed for residential HVAC contractors. It's very easy to use – just place the unit in the customer's home, turn on the power and it begins to record the six key air quality parameters:

- ★ **Temperature / Humidity - comfort parameters**
- ★ **CO - safety parameter**
- ★ **CO<sub>2</sub> - ventilation, general air quality indicator**
- ★ **VOC's - cleaning products, cooking odors**
- ★ **Particulates - dust, smoke, poor filtration**

## Follow Through Professionally

With the graphs created by the Home AirBoxx you are able to create powerful sales presentations and winning proposals.

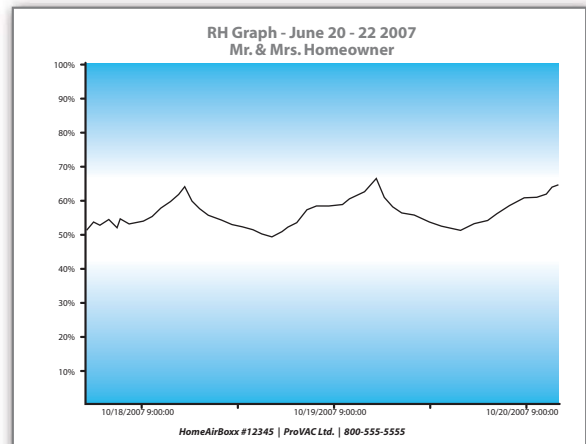

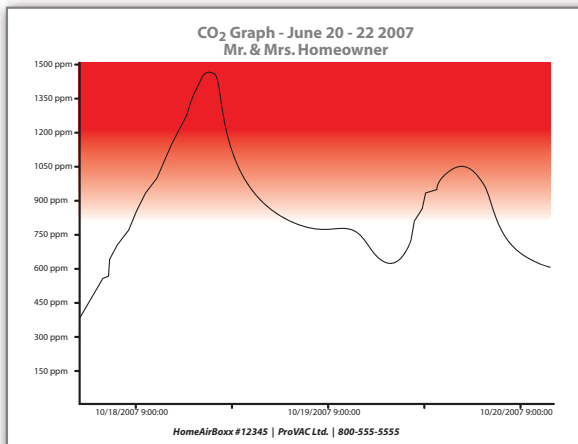

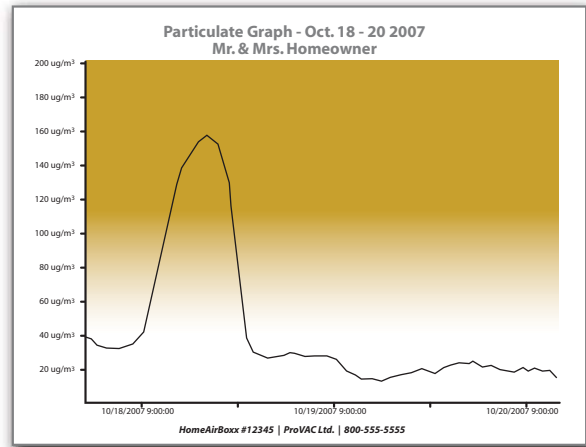

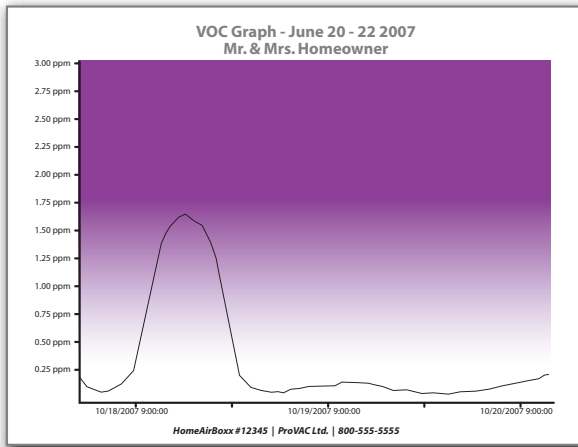

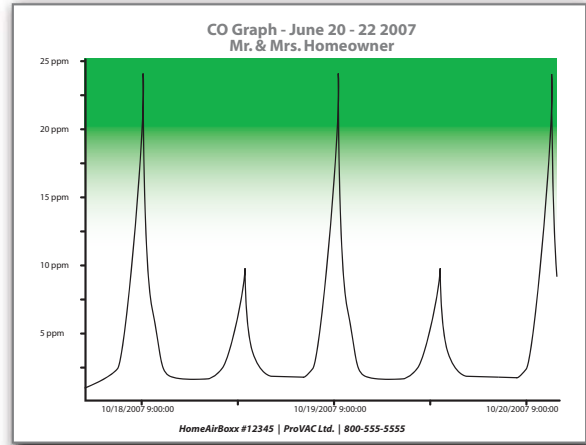

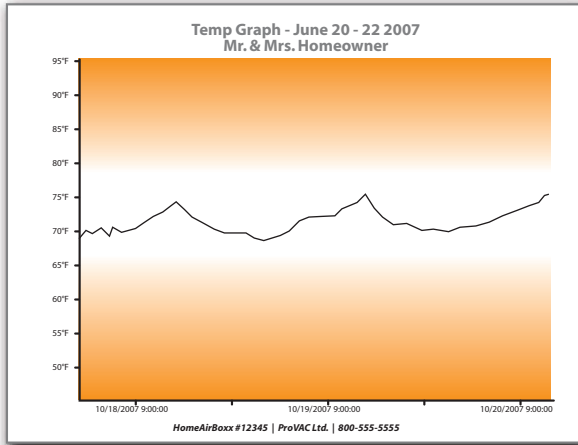

This data can then be used to diagnose shortcomings within a home, helping the homeowner make decisions about remediation and additional product purchases in order to improve the comfort and air quality of the home.

## A History of Expertise

KD Engineering is an independent HVAC testing agency and manufacturer of indoor air quality instrumentation with more than 30 years of experience. Our Indoor Air Quality (IAQ) division has been producing IAQ monitors since the early 1990s. We are committed to outstanding products, exacting standards, and excellent customer service. When you call our toll-free number you will speak with engineers who know the instrumentation and how indoor air quality investigations are performed.

# Home AirBoxx Reports

Once the sampling period is complete simply plug the Home AirBoxx into a PC and download the data with the touch of a key. The Home AirBoxx Control Panel will then generate six, easy to read, color graphs as shown below. The gradient in each graph defines typical concern or action levels.

# Simple, Effective and Easy to Use

## Let the Home AirBoxx be the Key to Your Success

- ★ *Quiet and inconspicuous in the home*
- ★ *Easy to set up - just plug it in*
- ★ *No need to tie up telephone lines*
- ★ *High quality, color reports*
- ★ *Reports ready in seconds*
- ★ *Highly accurate and reliable sensors*
- ★ *Unlimited testing with no extra fees*
- ★ *Free software with each unit*
